

QuStream Token

QuStream Token (QST) - Powering the Ecosystem

The QuStream Token (QST) is the utility token powering the QuStream ecosystem, serving as the foundation of our delegated proof-of-stake (dPoS) mechanism that secures and operates the validator nodes of our Layer 1 blockchain.

QST is more than just a token - it is the lifeblood of QuStream's next-generation blockchain, designed for scalability, security, and quantum-resistant encryption.

Current Solana-Based QST & Future Migration

In preparation for the launch of our native Layer 1 blockchain, QST is initially being issued as a Solana-based token. This will allow for immediate utility within the ecosystem while maintaining flexibility for early adopters and stakeholders.

Migration to Layer 1 Blockchain

Once the QuStream blockchain is fully operational, the Solana-based QST tokens will be migrated to the native QuStream token through a seamless transition process. Holders will be able to exchange their existing QST for the native token at a 1:1 ratio, ensuring continuity in staking, governance, and other utilities.

Utility & Benefits

Staking & Validator Participation

Stake QST to run validator nodes

Ecosystem Transactions

QST will be used for transaction fees, smart contract execution and on-chain services

Governance

Token holders will have the opportunity to participate in network governance decisions, influencing key upgrades and protocol changes

DeFi & dApp Integrations

As the QuStream ecosystem expands, QST will play a vital role in decentralized applications, liquidity pools and more
